

## Shade Gardening: Beautiful Color That's Made In The Shade

Gardening in the shade sort of sounds like a lazy man's dream, doesn't it? In fact, there is such a thing as shade gardening. It focuses on growing shade-loving plants in areas of your landscape that may not get much sun. Many gardeners focus on blooming gardens or plants that require direct sunlight. But there are many plants that bring beauty to your shaded plots.

Successful shade gardening depends on being able to balance the different kinds of shade available throughout the day. From direct sunlight to full shade, there are many different light levels. Some spots of ground may be in deep shade all day long, while others bask in filtered sunlight. Other areas may experience wide variety in amount of sun. These variations will play a central role in determining the vitality and beauty of your shade garden.

Some shade-loving plants thrive in deep shade all day long. Other varieties may be able to tolerate long periods of filtered sunlight. There are a few plants that must be kept away from any amount of direct sun.

Get to know a group of plants called hostas. Hosta plants are shade-loving plants available in a full range of sizes, colors and textures. They can produce beautiful blooms. But you'll be pleased to know that they can provide a splash of interesting color even when not in bloom.

Once you get hosta plants going in your shade garden, they should last for a while. They are perennials, meaning they live for more than a year. Like fine wine, these plants age beautifully. Their attractive clumps of color will continue to deepen and grow every year. You'll begin to anticipate what wonderful sights you will see each season.

You can find hosta plants in all different shapes and sizes. The best growing conditions will include morning sun or filtered sunlight. They can survive in deep shade but may not be as spectacular. They also make excellent container plants. Not only will container planting allow you to move them into optimal conditions from time to time, you can also use them to add color to your porch, patio or indoor areas.
